High-Speed Labelling

Versatile Stand-Alone Label Applicator

Our high-speed stand-alone label applicator is designed for accurate, consistent and efficient labelling across a wide range of products and packaging formats. It can be configured for hologram, security, VVM and other specialty labels, making it suitable for diverse packaging applications.

Flexible Line Integration

Designed for easy integration with existing packaging lines, the system offers flexible installation and seamless synchronization with conveyors and other production equipment. Its compact design and reliable operation help minimize setup time and production downtime.

High-Speed & Precise Application

The system is available in multiple speed configurations to meet different production requirements:

- 150 products/minute
- 300 products/minute
- 450 products/minute

Advanced sensing and controlled label dispensing ensure precise label positioning and consistent application even at high production speeds.

Multiple Labelling Configurations

The applicator can be equipped with optional label pressing and folding mechanisms for specialized applications. It supports L-shape and U-shape label application, as well as hologram and VVM labels on bottles, cartons and film rolls.

Smart & User-Friendly Operation

The machine is equipped with a PLC-based control system and HMI interface for easy operation and parameter adjustment. Operators can quickly adjust labelling parameters, conveyor speed and product settings for smooth changeovers and efficient production.
