UTO LAB SAL – LABEL APPLICATOR

The UTO LAB SAL is a reliable and versatile labelling solution designed for integration with existing production lines. It provides accurate, consistent and repeatable label application for a wide range of products. The system can be configured for top or side labelling and can be equipped with optional hot-stamp printing, thermal transfer printing or Print & Apply systems.

Simple to Operate

The intuitive HMI interface and easy-to-adjust mechanisms simplify machine operation, product setup and changeovers, helping reduce downtime and improve production efficiency.

Durable & Hygienic Design

Designed for demanding production environments, the UTO LAB SAL is constructed using SS 304 stainless steel and anodized aluminium, providing durability, hygiene and long-term operational reliability.

Versatile Configuration

- The adjustable product sensing system accommodates different product sizes and shapes, while precise positioning ensures accurate and repeatable label placement.
- The system supports optional hot-foil printer integration, enabling synchronized printing and labelling for accurate code positioning and product identification.
- The machine can be configured for automatic inline or semi-automatic operation, depending on production requirements and line configuration.

Production Efficiency

- The Production Preset function allows the machine to automatically stop after completing a predefined quantity, supporting efficient production control.
- The Label Countdown function provides operators with real-time information on the remaining labelling quantity, helping monitor production progress.
- The Production Counter records the total number of products processed, providing convenient production monitoring.
- The Touchscreen HMI with Job Memory allows easy parameter management and storage of product settings, enabling faster setup and smooth changeovers between different products.

Compliant

The UTO LAB SAL is designed for pharmaceutical and regulated packaging environments, supporting GMP-oriented manufacturing practices and 21 CFR Part 11 requirements. The system provides controlled operation, user access management and electronic data handling features to support data integrity, traceability and regulatory compliance.
